Re: The Doe Run Company – Elvins/Rivermines Mine Tailings Site Monthly Progress Report

Dear Mr. Gunter:

As required by Article VI, Section 56 of the Unilateral Administrative Order (UAO) (CERCLA-07-2005-0169) for the referenced project and on behalf of The Doe Run Company, the progress report for the period February 1, 2013 through February 28, 2013 is enclosed. If you have any questions or comments, please call me at 573-638-5020 or Mark Nations at 573-518-0800.

Sincerely,

Ty L. Morris, P.E., R.G.
Vice President

TLM/jms

Elvins/Rivermines Mine Tailings Site
Park Hills, Missouri
Removal Action - Monthly Progress Report
Period: February 1, 2013 – February 28, 2013

1. Actions Performed and Problems Encountered This Period:

- a. Continued operating the roughing filter during the period. Flow was diverted around the ZVI/sand filter, aeration tank, and final sand filter until February 21, 2013 when flow through those portions of the pilot test was resumed.
- b. Completed renovations to the ZVI/sand filter, aeration tank, and final sand filter between February 18, 2013, and February 21, 2013. Renovations to the ZVI/sand filter included: replacing the tank contents with a stratified media that included a layer of sand, a layer of pea rock, and a layer of mulch mixed with sand and pea gravel; installing several pieces of rebar vertically through the sand and pea rock layers; and adding baffles to increase contact time. The round tank is again serving as an aeration basin/settling tank and sand was replaced in the final sand filter.
- c. Continued to take analytical samples from the pilot test two to three times a week. Samples were taken from the roughing filter (RMP-Rough) through bypass pipe except for the sampling events on February 25, 2013, and February 27, 2013, when the sample was taken through the syphon hose. Following the renovations to the ZVI/sand filter, aeration tank, and final sand filter, samples were also taken from the ZVI/sand filter effluent, and final sand filter effluent.
- d. Continued to take analytical samples from the seep pond effluent and the western treatment pond effluent to monitor the metals reduction of the treatment pond.
- e. Vandalism occurred at the pilot test twice during the period. Once on February 6, 2013 and again on February 22, 2013. The pipe going into the pilot test was damaged. In both instances flow was temporarily interrupted but restored.
- f. Work continued on the task of rehabilitating the western treatment pond. This work focused on allowing the saturated media to activate. As part of the media activation process, the flow has been progressively increased and is now at full capacity. Analytical results of samples taken from the seep and western treatment pond indicate that metals reduction is occurring.

2. Analytical Data and Results Received This Period:

- a. Dissolved zinc concentrations in the pilot test effluent ranged between 7.19 mg/L and 11.42 mg/L prior to the renovations. Dissolved zinc concentrations in the pilot test effluent ranged between 6.55 mg/L and 10.42 mg/L after the renovations were completed.
- b. Total zinc concentrations in the pilot test effluent ranged between 8.18 mg/L and 12.21 mg/L prior to the renovations. Total zinc concentrations in the pilot effluent ranged between 6.63 mg/L and 10.25 mg/L after the renovations were completed.
- c. Total iron concentrations in the pilot test effluent ranged between 1.16 mg/L and 1.52 mg/L prior to the renovations. Total iron concentrations in the pilot effluent ranged between 0.25 mg/L and 0.41 mg/L after the renovations were completed.
- d. Total suspended solids concentrations in the pilot test effluent ranged between 9.0 mg/L and 31.0 mg/L after the renovations were completed. Samples were not evaluated for suspended solids prior to the renovations.
- e. Dissolved zinc and total zinc concentrations in the seep pond effluent were measured at 21.2 mg/L and 22.6 mg/L. Dissolved zinc and total zinc concentrations in the western treatment pond effluent were measured at 4.99 mg/L and 7.53 mg/L respectively.

- f. During this period, water samples were collected from just upstream of Old Missouri Highway 32, as well as from upstream and downstream of the confluence of the site discharge with Flat River. The analytical results for this event are included in this progress report.
- g. During this period, the Ambient Air Monitoring Reports for Third Quarter 2012, October 2012, and November 2012 were completed. Any issues identified in these reports are discussed below. A copy of these documents has been sent to your attention.

The Third Quarter 2012 Ambient Air Monitoring Report noted the following:

- The action levels for lead and dust were not exceeded.
- No samples were taken with the Rivermines #3 (Water Treatment Plant) TSP monitor on 07/02/12 due to mechanical failure. Upon discovery, the issue was corrected.
- No samples were taken with the TSP monitors on 07/04/12 due to the holiday.
- A QA filter blank was completed on the Rivermines #1 (Office) TSP and PM₁₀ monitors on 08/30/12.
- No samples were taken with the TSP and PM₁₀ monitors on 09/03/12 due to the holiday.
- No samples were taken with the Big River #4 (Primary) PM₁₀ monitor on 09/21/12 due to mechanical failure. Upon discovery, the issue was corrected.
- No samples were taken with the Rivermines #1 (Office) TSP and PM₁₀ monitors on 09/27/12 due to electrical issues caused by the weather. Upon discovery, these issues were corrected.
- There was a QA blank filter associated with the Rivermines #2 (North) TSP and PM₁₀ monitors on 09/28/12.

The October 2012 Ambient Air Monitoring Report noted the following:

- The action levels for lead and dust were not exceeded.
- No sample was taken with the Big River #4 (Primary) PM₁₀ monitor on 10/09/12 due to mechanical failure of the elapsed time indicator. Upon discovery, the issue was corrected.

The November 2012 Ambient Air Monitoring Report noted the following:

- The action levels for lead and dust were not exceeded.
- No sample was taken with the Big River #4 (Primary) TSP monitor on 11/02/12 due to the filter being compromised by moisture during a storm event. Upon discovery, the issue was corrected.
- The sample for Big River #4 (QA) PM₁₀ monitor was invalid on 11/05/12 due to the elapsed run time being outside of the tolerances. Upon identifying the issue, timer and sampling procedures were evaluated and the issue was corrected.
- The sample for Rivermines #1 (Office) TSP monitor was invalid on 11/15/12 due to the elapsed run time being outside of the tolerances. Upon identifying the issue, timer and sampling procedures were evaluated and the issue was corrected.
- No samples were taken with the TSP and PM₁₀ monitors on 11/21/12, 11/22/12, and 11/23/12 due to the holiday.
- A QA filter blank was completed on the Rivermines #3 (Water Treatment Plant) TSP and PM₁₀ monitors on 11/27/12.

3. Developments Anticipated and Work Scheduled for Next Period:

- a. Continue analytical sampling and field measurements three times a week. No WET tests are planned.
- b. Continue monthly analytical sampling and field measurements from the seep pond and western treatment pond.
- c. Continue to operate the renovated pilot test.
- d. Complete monthly water sampling activities as described in the Removal Action Work Plan.
- e. Complete air monitoring activities as described in the Removal Action Work Plan.
- f. Continue monitoring the western treatment pond to see that the hydraulics are working properly and evaluate the metals reduction as the pond continues to come online.

4. Changes in Personnel:

- a. None.

5. Issues or Problems Arising This Period:

- a. None.

6. Resolution of Issues or Problems Arising This Period:

- a. None.

End of Monthly Progress Report

February 20, 2013

Allison Olds
Barr Engineering Company

RE: Rivermines NPDES

WorkOrder: 13020614

Dear Allison Olds:

TEKLAB, INC received 4 samples on 2/13/2013 12:25:00 PM for the analysis presented in the following report.

Samples are analyzed on an as received basis unless otherwise requested and documented. The sample results contained in this report relate only to the requested analytes of interest as directed on the chain of custody. NELAP accredited fields of testing are indicated by the letters NELAP under the Certification column. Unless otherwise documented within this report, Teklab Inc. analyzes samples utilizing the most current methods in compliance with 40CFR. All tests are performed in the Collinsville, IL laboratory unless otherwise noted in the Case Narrative.

All quality control criteria applicable to the test methods employed for this project have been satisfactorily met and are in accordance with NELAP except where noted. The following report shall not be reproduced, except in full, without the written approval of Teklab, Inc.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Michael L. Austin
Project Manager

Abbr Definition

- CCV Continuing calibration verification is a check of a standard to determine the state of calibration of an instrument between recalibration.
- DF Dilution factor is the dilution performed during analysis only and does not take into account any dilutions made during sample preparation. The reported result is final and includes all dilutions factors.
- DNI Did not ignite
- DUP Laboratory duplicate is an aliquot of a sample taken from the same container under laboratory conditions for independent processing and analysis independently of the original aliquot.
- ICV Initial calibration verification is a check of a standard to determine the state of calibration of an instrument before sample analysis is initiated.
- IDPH IL Dept. of Public Health
- LCS Laboratory control sample, spiked with verified known amounts of analytes, is analyzed exactly like a sample to establish intra-laboratory or analyst specific precision and bias or to assess the performance of all or a portion of the measurement system. The acceptable recovery range is in the QC Package (provided upon request).
- LCS D Laboratory control sample duplicate is a replicate laboratory control sample that is prepared and analyzed in order to determine the precision of the approved test method. The acceptable recovery range is listed in the QC Package (provided upon request).
- MB Method blank is a sample of a matrix similar to the batch of associated sample (when available) that is free from the analytes of interest and is processed simultaneously with and under the same conditions as samples through all steps of the analytical procedures, and in which no target analytes or interferences should present at concentrations that impact the analytical results for sample analyses.
- MDL Method detection limit means the minimum concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero and is determined from analysis of a sample in a given matrix type containing the analyte.
- MS Matrix spike is an aliquot of matrix fortified (spiked) with known quantities of specific analytes that is subjected to the entire analytical procedures in order to determine the effect of the matrix on an approved test method's recovery system. The acceptable recovery range is listed in the QC Package (provided upon request).
- MSD Matrix spike duplicate means a replicate matrix spike that is prepared and analyzed in order to determine the precision of the approved test method. The acceptable recovery range is listed in the QC Package (provided upon request).
- MW Molecular weight
- ND Not Detected at the Reporting Limit
- NELAP NELAP Accredited
- PQL Practical quantitation limit means the lowest level that can be reliably achieved within specified limits of precision and accuracy during routine laboratory operation conditions. The acceptable recovery range is listed in the QC Package (provided upon request).
- RL The reporting limit the lowest level that the data is displayed in the final report. The reporting limit may vary according to customer request or sample dilution. The reporting limit may not be less than the MDL.
- RPD Relative percent difference is a calculated difference between two recoveries (ie. MS/MSD). The acceptable recovery limit is listed in the QC Package (provided upon request).
- SPK The spike is a known mass of target analyte added to a blank sample or sub-sample; used to determine recovery deficiency or for other quality control purposes.
- Surr Surrogates are compounds which are similar to the analytes of interest in chemical composition and behavior in the analytical process, but which are not normally found in environmental samples.
- TNTC Too numerous to count (> 200 CFU)

Qualifiers

- | | |
|--|--|
| # - Unknown hydrocarbon | B - Analyte detected in associated Method Blank |
| E - Value above quantitation range | H - Holding times exceeded |
| J - Analyte detected below quantitation limits | M - Manual Integration used to determine area response |
| ND - Not Detected at the Reporting Limit | R - RPD outside accepted recovery limits |
| S - Spike Recovery outside recovery limits | X - Value exceeds Maximum Contaminant Level |

QUALIFIERS

SEMO PROJECT

DEFINITIONS

| | |
|-----|---|
| NA | Not Analyzed |
| ND | Not detected/ below Method Detection Limit. |
| B | Potential false positive value based upon blank sample data validation procedures. |
| E | Estimated value, exceeded the instrument calibration range. |
| G | Recommended sample preservation, extraction or analysis holding time was exceeded. |
| J | Lower than reporting limit and higher than MDL and is an estimated value. |
| K | Per client request, metals analysis was conducted less than 16 hours from sample collection/preservation. |
| * | Estimated value, QA/QC criteria not met. |
| ** | Unusable value, QA/QC criteria not met. |
| *** | Dissolved result > than associated Total result. |
| Λ | 1/100 Dilution |
| ☼ | Filtered Samples prepared in the field. |

ANALYTE QUALIFIERS

- H** Analysis conducted outside the EPA method holding time.
- M** Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.
- R** RPD value was outside control limits.
- NES** Not enough sample.

| Total Suspended Solids | mg/l | 5 | 4 | 80% | 85-115 | |

LABORATORY CONTROL SAMPLE

| Parameter | Units | Spike Conc. | LCS Results | LCS % Rec | % Rec Limits | Qualifiers |
|------------------------|-------|-------------|-------------|-----------|--------------|------------|
| Total Suspended Solids | mg/l | 5 | 6 | 120% | 85-115 | |

QUALIFIERS

SEMO PROJECT

DEFINITIONS

| | |
|-----|---|
| NA | Not Analyzed |
| ND | Not detected/ below Method Detection Limit. |
| B | Potential false positive value based upon blank sample data validation procedures. |
| E | Estimated value, exceeded the instrument calibration range. |
| G | Recommended sample preservation, extraction or analysis holding time was exceeded. |
| J | Lower than reporting limit and higher than MDL and is an estimated value. |
| K | Per client request, metals analysis was conducted less than 16 hours from sample collection/preservation. |
| * | Estimated value, QA/QC criteria not met. |
| ** | Unusable value, QA/QC criteria not met. |
| *** | Dissolved result > than associated Total result. |
| ^ | 1/100 Dilution |
| | Filtered Samples prepared in the field. |

ANALYTE QUALIFIERS

- H** Analysis conducted outside the EPA method holding time.
- M** Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.
- R** RPD value was outside control limits.
- NES** Not enough sample.
